apache-airflow-providers-anthropic ¶

The `anthropic` provider gives Dags direct access to Anthropic's own APIs — this page compares that choice against `common.ai`.

When to use this provider ¶

Use `anthropic` when a Dag needs Anthropic's native API surface — services Anthropic runs for you, which no vendor-neutral operator wraps:

- `AnthropicBatchOperator` and `AnthropicBatchSensor` — submit a Claude [Message Batches](#) job for asynchronous bulk processing and wait for it to complete; Message Batches run at 50% of standard cost, with most completing within an hour and a 24-hour SLA.
- `AnthropicAgentSessionOperator` — start a Managed Agents session in which the agent loop runs server-side on Anthropic's infrastructure; the Airflow task only kicks off the session and waits for its outcome.

Use [apache-airflow-providers-common-ai](#) instead when the AI step should be run by Airflow itself and stay vendor-neutral:

- Generation, classification, or structured extraction with `LLMOperator` — it works with Claude via a connection, and switching to another model provider later is a connection change, not a Dag rewrite.
- Agents whose loop runs **in the Airflow worker** with `AgentOperator` — Airflow-defined toolsets (SQL, hooks, MCP servers), human-in-the-loop review, and durable step replay.

Both `AgentOperator` and `AnthropicAgentSessionOperator` run agents with Claude models; the difference is where the loop executes and who controls the tools. `AgentOperator`

tool execution.

For example, running the Message Batches API directly:

tests/system/anthropic/example_anthropic_batch.py

[\[source\]](#)

```
from airflow.providers.anthropic.operators.batch import
AnthropicBatchOperator

run_batch = AnthropicBatchOperator(
    task_id="run_batch",
    conn_id=ANTHROPIC_CONN_ID,
    requests=requests,
    deferrable=True,
```

apache-airflow-providers-anthropic package ¶

[Anthropic](#) provider for Apache Airflow. Wraps the official Anthropic Python SDK to run the Claude Message Batches API asynchronously from Airflow, plus direct message and token-counting helpers.

Release: 1.0.0

Provider package ¶

This package is for the `anthropic` provider. All classes for this package are included in the `airflow.providers.anthropic` python package.

Installation ¶

You can install this package on top of an existing Airflow installation via `pip install apache-airflow-providers-anthropic`. For the minimum Airflow version supported, see [Requirements](#) below.

PIP package	Version required
apache-airflow	>=3.0.0
apache-airflow-providers-common-compat	>=1.12.0
anthropic	>=1.0.0

Optional dependencies ¶

These extras install optional third-party libraries that enable additional features of the provider. Install them when installing from PyPI. For example:

```
pip install apache-airflow-providers-anthropic[bedrock]
```

Extra	Dependencies
bedrock	anthropic[bedrock]>=1.0.0
vertex	anthropic[vertex]>=1.0.0
aws	anthropic[aws]>=1.0.0

Downloading official packages ¶

You can download officially released packages and verify their checksums and signatures from the [Official Apache Download site](#)

- [The apache-airflow-providers-anthropic 1.0.0 sdist package](#) (asc, sha512)
- [The apache-airflow-providers-anthropic 1.0.0 wheel package](#) (asc, sha512)
